Contact Jeff Schurman at jschurman@awma.org, or 412-904-6003 to discuss your opportunities.

**About the Conference**

The MEGA Symposium returns in 2021 as a virtual conference experience with a focus on the transition of the electric power industry to cleaner and climate resilient electric power that can remain cost-effective and reliable. Electric power energy issues abound as the nation and the industry address climate change, air quality, waste and water policy and technology issues related to energy production and delivery. With a 21-year history, this conference has adapted as the industry’s demands and key interests have changed, switching its focus from advancements in emissions control technologies towards environmental and energy policy, renewable energy sources, and transformative projects.

Find additional conference details online at www.awma.org/MEGA.
